

Assignment 3

Vignesh M Pai (20211132)

1

The total magnetic moment will be $-L^3$ or -8000 .

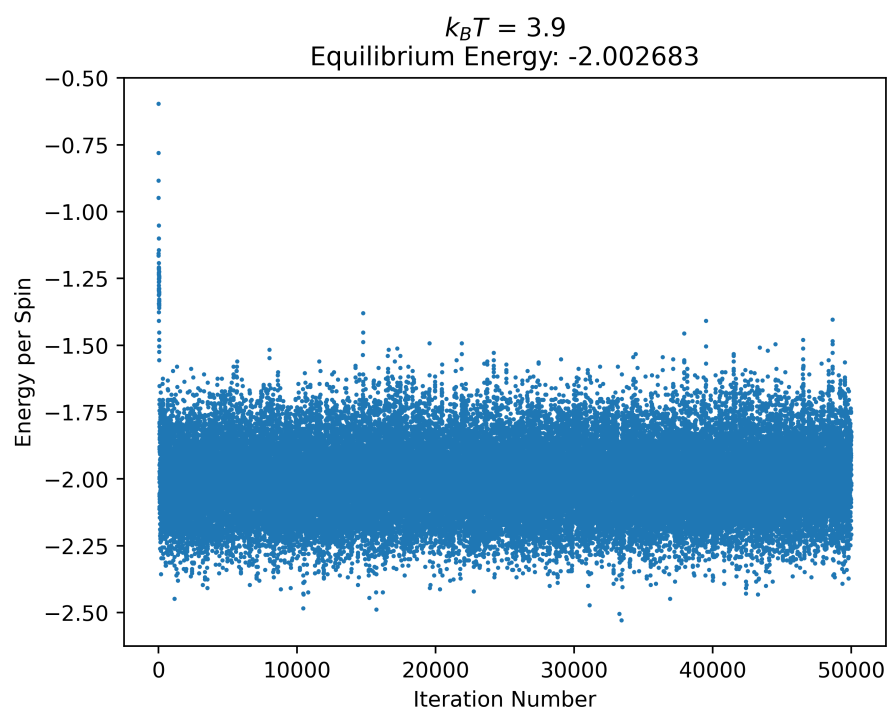

2

The number of interactions is 6 per spin and thus $6L^3/2 = 3L^3$. Since all interactions will contribute to $-J$ interaction energy, the total energy will be $-3JL^3 = -3000$.
